Mineral

dynamic, clear & distinctive

All rocks on our earth are made from minerals. Their structures are shaped by movements in the Earth's interior over the course of millions of years, and their idiosyncratic shapes and iridescent colours commonly feature on jewellery. We have always used mineral-rich rocks, ground into fine pigments, to add colour accents to our wood.

We limit our selection to delicate pastel shades and stone colours which range from light to dark. The sight of these mineral colours is associated with a feeling of clarity and grounding. Colour nuances and veneer patterns can create a pleasing play of contrasts where the white and the wood colours diverge.

From the spectrum of our Mineral colours, Pebblestone and Oyster tones combine to create our Edition Oak for the floor.
