# Terra

**discreet, earthy & warm**

A healthy ground is the source of all growth and development. Looking at warm earth tones creates connectedness and confidence. Depending on which elements predominate in the soil, the spectrum ranges from golden sandy tones to dark brown, almost black shades.

Also a tree, as it grows, absorbs the elements of its location, from which its natural wood colour emerges. We combine the richness of the original earth colours with the oak wood. Subdued to strong, muted colours stand side by side in a rather low-contrast and gentle way. An inner warmth can be felt throughout.

From the wide range of our Terra colours, the colour characters Linen and Smoke result in the Edition Oak for the floor.
